CASE STUDY

NAVSOFT

NetSuite Connector for Packing & Shipping Solution

OVERVIEW

Navsoft offers an innovative warehouse packing solution that allow you to pack your products smarter and faster. Our FreightSnap Connector allows you to grade the line item dimensions of your NetSuite orders. Whereas, 3DBinPacking Connector automatically calculates the box spaces and finds out the optimum space utilization of your carton boxes.

KEY FEATURES

- **Measure Freight Dimension** - FreightSnap Connector allows you to quickly capture the measurements, photos, ID numbers, weight, and other shipment information of your freight and automatically sync this data in the NetSuite.
- **Box Space Optimization** - The dimensional information of the freight will be used to improve at carbonization and load planning, enable more efficient slotting and storage within the warehouse, minimize packaging waste, and reduce the overall footprint of the freight.
- **Shipment Load Planner** - 3DBinPacking Connector calculates measurements of the area that your packing will use and load plans for mixed products shipments.
- **Pack the Shipment** - 3DBinPacking Connector measures the the quantity and dimensions of the items to pack and then, display the list of boxes or packing spaces you need to pack the items.

OUTCOMES

- 'FreightSnap' Connector grabs the dimension of the freight and automatically sync this data in the NetSuite.
- '3DBinPacking' Connector calculates the box spaces and finds out the optimum space utilization for carton boxes.
- 3DBinPacking Connector calculates measurements of the area that your packing will use and load plans for mixed products shipments.
- Optimized warehouse operations to ensure all orders are picked and packed as efficiently and quickly as possible.

KEY BENEFITS

- Optimized packing saves your business time, money and space
- Enable more efficient slotting and storage within your warehouse
- Minimize packaging waste, and reduce the overall footprint of your freight.
- Maximize the use of space on each carton box

ITEM PACKING PROBLEM SOLVED BY FREIGHTSNAP & 3DBINPACKING CONNECTOR FOR NETSUITE

Navsoft has successfully implemented the NetSuite Connector with 'FreightSnap' and '3DBinPacking' for a California based company who are in the distribution business of more than 25 million well-being products. The client's item information (along with dimensions) were loaded into the NetSuite and then packed into the Bins. We have used 3DBP Connector to give the dimension of the Container and pack the Items. 3DBP Connector measures the smallest container which the bins can fit into. The system tells the smallest dimension and weight of the Container to pack the items. Also the system shows an error if any items are not packed into the Containers.

The data passes through the FreightSnap when the list of all items and bins are showing in Item Fulfilment. After Item is fulfilled, it passes the information and all data like Ship/Pallet/Carton information goes to Sales Order through 3DBinPacking. The Warehouse Team gets email notification about sales order and items to pack through 3DBinPacking. Warehouse person can see the packing visualization that comes through 3DBinPacking to mail, so they can check how the items are packed which system has generated in the best possible way
